

Annotation

The Following Master's Thesis refers to the estimation of the natural-resource potential in Kaspi Municipality. Particularly, we are researching forest and land resources of the above-mentioned territory. The goal of the work is to promote the importance of the forest and land resources and to outline its dangers, which is hinder to its preservation. During the research we used GIS technologies and for gaining information we implemented several field trips on the territory of the Kaspi municipality and in the Forest Service of Shida Kartli region (Khashuri).

Hence to the aim of the work, we defined following tasks: complex-geographical analysis of the researching object; definition of the forest and land resources in dynamic (1974-1995) and estimation of its importance in the agriculture.

The chronological analysis of the forest and land resources gives us possibility to see clearly dynamic processes and to define dangers and conflicts, which characterize above-mentioned resources on the researching territory.
