

Annotation

The Following Master's Thesis refers to the promotion of the natural sightseeing existed in the Imereti region and its popularization. It should be marked, that its great part only been known to the narrow circle of scientists.

Today, with the historical, architectural and archaeological monuments in the routes should be considered natural wonders, which are much attractive for the traveling in our country.

The work gives the characterization all of those remarkable natural object existed on the territories of the Imereti municipality, which was hitherto little known and, as I mentioned above, only a certain group of specialists knew that.

Hence to the aim of the research:

- there was made grouping of the known and the unknown natural sightseeings according to the certain components on the territory of Imereti;
- there was created general map of Imereti, in which all the natural sightseeings is given to the work (large scale 1: 195 000);
- there was created large scale maps with tourist routes separately for each municipality;
- there was outlined protection problems of the natural sightseeing;
- there was work out recommendations.
