

Annotation

Master's thesis topic is „Water of excess and deficit regions of geography”. In General, there are some of the world's fresh water shortages in the region. This issue is very urgent and serious problem in modern society. The paper aims to present the distribution of water resources in the world, the region and in Georgia. Water stress, excess and deficiency regions and identify the problems that are associated with it. Also deals with the distribution and consumption of regional water resources (in the Caucasus, Central Asia, Middle East) features, including the connection between population and economy.

As it is known, Georgia is rich in water resources, but the region is in the opposite situation, that's why my goal was defined who may have an interest in our country's resources. Can the water of a large-scale exports to much? Because, in the region (including the South Caucasus, Central Asia, Middle East) there is a shortage of fresh water, they have a great deal of potential to satisfy their demand. Also, the topics discussed, the situation in the regions and their characteristics. Parties of Georgia with the water flow is calculated according to the number of per capita and per area unit, which reflects an accurate picture of the situation and valid conclusion.

The paper deals with water-related conflicts between Israel and Egypt as an example. Fresh water shortage, often becomes the basis for the confrontation between the two countries. For a good example of the above-mentioned that conflict. Also, the theme of World Water main exporting and importing countries and their peculiarities.

I used the method, according to the literature of community gathering and analysis, as well as statistical data and analyzes according to reliable conclusions to.
